

HMIS Release Notes

Alert When ES, TLP or Outreach client lacks a VI-SPDAT assessment.

12/11/2020

What are the changes?

An automatic client alert has been added to alert users when a client who is the head of household or single individual has an enrollment in an emergency shelter, street outreach or Transitional Housing program but lacks a VI-SPDAT assessment. An alert will only appear 14 days after enrollment into the program.

Which users are impacted?

All users in the system will see the alerts, via the CAN/211 Dashboard for clients. Alerts will only be shown for the programs associated with the organization you are logged in under.

How does this help?

This serves as a reminder that a VI-SPDAT should be performed on this client.

When will I see this change in HMIS?

This change is expected to be rolled out on 12/11/2020

Summary of the changes:

- New automatic alert added for clients missing a VI-SPDAT assessment. This will appear alongside any other client alerts a user has displayed.
