

# HMIS Release Notes

## CCEH DV Workflow

November 2, 2020

### What are the changes?

The DV workflow used by CCEH has been updated based off of changes submitted by CCADV. The changes include the following:

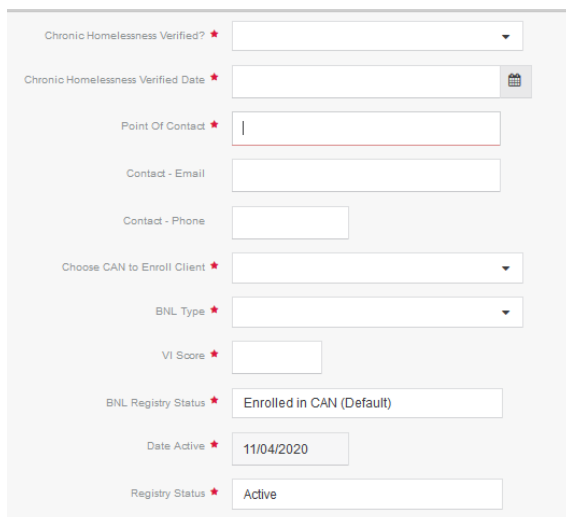

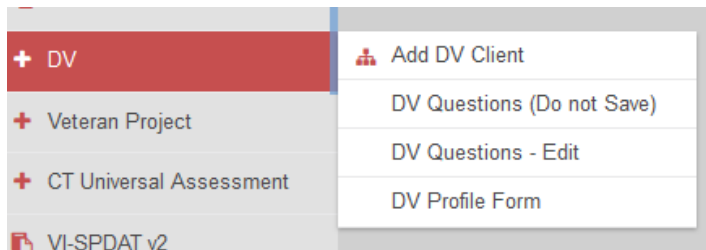

- Remove existing question 'Housing of Type Required (# of Beds Rooms)'
- Replace with 'BNL Type' and include drop down options of 'Family' and 'Individual'
- Remove 'High Risk Priority'

### Which users are impacted?

This assessment is available to CCEH under the following roles

- CCEH All Features

And is accessible under: Case Manager Tab > Left Menu > Assessments > DV

The screenshot shows a form with the following fields and values:

- Chronic Homelessness Verified?
- Chronic Homelessness Verified Date
- Point Of Contact
- Contact - Email
- Contact - Phone
- Choose CAN to Enroll Client
- BNL Type
- VI Score
- BNL Registry Status
- Date Active
- Registry Status

### How does this help?

This is intended to help reduce the incidents of DV households being incorrectly identified as Individual on the VI when they should be Family. The original assessment question was misleading and at times inaccurate information about the number of beds needed was triggering the wrong VI type to be assigned.

### When will I see this change in HMIS?

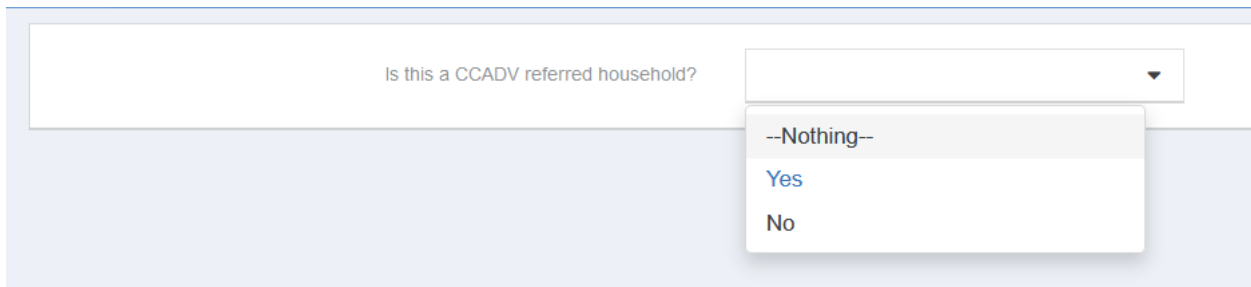

**Monday, November 2, 2020.**

## Summary of the changes:

- Added a custom assessment to required roles, under the Case Management tab > Left Menu > Program Assessments > “CCADV”
- Added a custom export for a restricted list of users under System Wide Reporting > Custom Exports > CCADV

## Screenshots of Changes

### New Assessment:

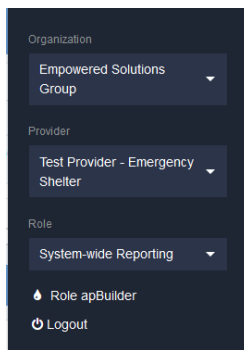

Is this a CCADV referred household?

--Nothing--

Yes

No

### New CCADV BNL View Under the Role System Wide Reporting:

Organization

Empowered Solutions Group

Provider

Test Provider - Emergency Shelter

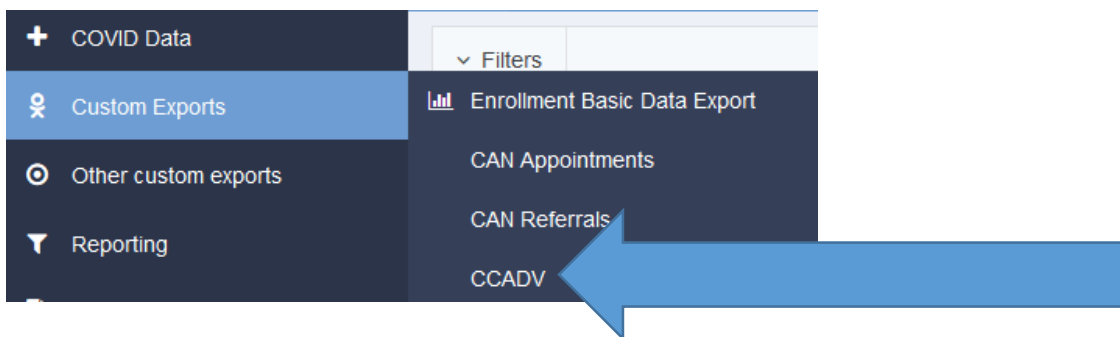

Role

System-wide Reporting

Role apBuilder

Logout

### Select Custom Exports and then select CCADV

+ COVID Data
