

HMIS Release Notes

Update to COVID-19 Vaccine Workflow Data Collection

September 2, 2021

What are the changes?

The COVID-19 vaccine data collection workflow will now include a field to select the client's current enrollment when entering vaccine data for the first time. If vaccine data was previously entered for a client during another enrollment or through the left side menu, that information will populate in the new intake workflow and no enrollment selection will show. Users can update any pre-populated data if new information is available. For example, if a client's status changes from partially to fully vaccinated.

Programs may also consider adopting the best practice of uploading a copy of a client's vaccination card to HMIS as additional documentation.

Which users are impacted?

- DOH AIDS/HOPWA
- DOH Emergency Solutions ESG
- PATH Outreach
- Supportive Housing
- Supportive Services (SSVF)
- Coordinated Access - Network
- Emergency Shelter (ES)
- Transitional Living (TLP)

How does this help?

Selecting the enrollment will associate the initial data collection of vaccination records to a specific program.

When will I see this change in HMIS?

This change is expected to be rolled out on September 2, 2021.
